1. *Chlorophytum comosum* (L.) Willd. (Amaryllidaceae). - A common species throughout the island, often forming dense mats on the ground surface. It has a large, bulbous rhizome, from which several long, slender, upright, linear leaves grow. The leaves are smooth, glaucous green, and have prominent midribs. The inflorescence is a terminal panicle, bearing numerous small, white flowers.

2. *Clitoria ternatea* L. (Fabaceae). - A common species throughout the island, often growing on disturbed ground or in open areas. It has a woody stem, from which several trifoliate leaves grow. The leaves are pinnately compound, with three leaflets per leaflet. The flowers are blue, with a distinct yellow center.

3. *Croton sylvaticus* L. (Euphorbiaceae). - A common species throughout the island, often growing on disturbed ground or in open areas. It has a woody stem, from which several palmately compound leaves grow. The leaves are deeply lobed, with prominent veins.

4. *Dioscorea bulbifera* L. (Dioscoreaceae). - A common species throughout the island, often growing on disturbed ground or in open areas. It has a tuberous root system, from which several aerial roots grow. The leaves are large, palmately compound, with prominent veins.

5. *Euphorbia heterophylla* L. (Euphorbiaceae). - A common species throughout the island, often growing on disturbed ground or in open areas. It has a woody stem, from which several palmately compound leaves grow. The leaves are deeply lobed, with prominent veins.

6. *Garcinia atroviridis* (Lam.) Merr. (Clusiaceae). - A common species throughout the island, often growing on disturbed ground or in open areas. It has a woody stem, from which several palmately compound leaves grow. The leaves are deeply lobed, with prominent veins.

7. *Hamelia patens* (L.) Willd. (Rubiaceae). - A common species throughout the island, often growing on disturbed ground or in open areas. It has a woody stem, from which several palmately compound leaves grow. The leaves are deeply lobed, with prominent veins.

8. *Ipomoea pes-caprae* (L.) Sweet (Convolvulaceae). - A common species throughout the island, often growing on disturbed ground or in open areas. It has a woody stem, from which several palmately compound leaves grow. The leaves are deeply lobed, with prominent veins.

9. *Jatropha curcas* L. (Euphorbiaceae). - A common species throughout the island, often growing on disturbed ground or in open areas. It has a woody stem, from which several palmately compound leaves grow. The leaves are deeply lobed, with prominent veins.

10. *Lantana camara* L. (Verbenaceae). - A common species throughout the island, often growing on disturbed ground or in open areas. It has a woody stem, from which several palmately compound leaves grow. The leaves are deeply lobed, with prominent veins.

11. *Millettia pinnata* (L.) Merr. (Fabaceae). - A common species throughout the island, often growing on disturbed ground or in open areas. It has a woody stem, from which several palmately compound leaves grow. The leaves are deeply lobed, with prominent veins.

12. *Passiflora quadrangularis* L. (Passifloraceae). - A common species throughout the island, often growing on disturbed ground or in open areas. It has a woody stem, from which several palmately compound leaves grow. The leaves are deeply lobed, with prominent veins.

13. *Pithecellobium dulce* (L.) Merr. (Fabaceae). - A common species throughout the island, often growing on disturbed ground or in open areas. It has a woody stem, from which several palmately compound leaves grow. The leaves are deeply lobed, with prominent veins.

14. *Ruellia tuberosa* (L.) Steyermark (Acanthaceae). - A common species throughout the island, often growing on disturbed ground or in open areas. It has a woody stem, from which several palmately compound leaves grow. The leaves are deeply lobed, with prominent veins.

15. *Sapindus mukorossi* L. (Sapindaceae). - A common species throughout the island, often growing on disturbed ground or in open areas. It has a woody stem, from which several palmately compound leaves grow. The leaves are deeply lobed, with prominent veins.

16. *Sesbania grandiflora* (L.) Merr. (Fabaceae). - A common species throughout the island, often growing on disturbed ground or in open areas. It has a woody stem, from which several palmately compound leaves grow. The leaves are deeply lobed, with prominent veins.

17. *Sida glabra* L. (Malvaceae). - A common species throughout the island, often growing on disturbed ground or in open areas. It has a woody stem, from which several palmately compound leaves grow. The leaves are deeply lobed, with prominent veins.

18. *Tecoma stans* (L.) Sweet (Bignoniaceae). - A common species throughout the island, often growing on disturbed ground or in open areas. It has a woody stem, from which several palmately compound leaves grow. The leaves are deeply lobed, with prominent veins.

19. *Thespesia populnea* (L.) Solms (Malvaceae). - A common species throughout the island, often growing on disturbed ground or in open areas. It has a woody stem, from which several palmately compound leaves grow. The leaves are deeply lobed, with prominent veins.

20. *Trichilia emetica* (L.) Merr. (Meliaceae). - A common species throughout the island, often growing on disturbed ground or in open areas. It has a woody stem, from which several palmately compound leaves grow. The leaves are deeply lobed, with prominent veins.
